

几个关键的指针和数据：

post point: 记录每次state 3->state 1的起始  
wrpost\_value: 记录当前有多少个

thread action to point and value			
listen thread	Phase 1	Phase 2	Phase 3
	head++	busy_value++	post_value--
server thread	tail++	free_value++	busy_value--
server thread (check_flags)	post +=...	post_value...	free_value...
